

CLEAR*EX*cellence™

LIQUID TANK CLEANER

GENERAL INFORMATION

CLEAR*EX*cellence is a highly concentrated liquid detergent cleaner, which contains a very effective surfactant blend, sequestering and chelating agents. The formulation emulsifies and disperses tank mix residues for easy removal of pesticidal contaminants. It is also effective in counteracting detrimental effects of minerals commonly found in hard water. **CLEAR*EX*cellence** increases the pH, which improves solubilization of herbicide residues.

CLEAR*EX*cellence is effective in removing the residues of Sulfonylurea, 2, 4-D, and Dicamba herbicides.

DIRECTIONS FOR USE

Large Volume Tanks: One gallon of **CLEAR*EX*cellence** will treat up to 400 gallons of water. Adjust the dilution rate as needed for individual conditions. Circulate liquid through valves, hoses and pump. Use as directed, but allow the rinse solution to remain in the sprayer and its parts overnight

Small Volume Tanks: Fill tank half full with water and use one ounce or more for each 3 gallons of the tank volume. Agitate thoroughly, drain and follow with clean water rinse.

TYPICAL PROPERTIES

Appearance	Semi-transparent to transparent liquid 1.0 – 1.1
Specific gravity (25°C)	1.0 - 1.1
pH (neat)	10.5 - 12.5
Boiling Point	Not determined
Flash point	> 200°F
Water solubility	Soluble
