

REVENUE®

CROP RESIDUE DIGESTOR

USE REVENUE® TO RECLAIM INVESTMENT DOLLARS TIED UP BY RESIDUE

TREATED W/ REVENUE®

UNTREATED

REVENUE® is the most complete and advanced tool for managing crop residue.

It delivers enhanced residue breakdown powered by Crop Excellence® 100% natural team of residue digesting microorganisms. This all-in-one residue management product combines viable and capable microbes with organic acids and nitrogen (1-0-0) to degrade complex polymers such as Cellulose, Lignin, Chitin and related compounds. This enhanced biological breakdown allows drills and planters to slice through residue instead of bouncing over it; reduces hair pinning, promotes optimal seed placement, uniform emergence and an optimized stand. REVENUE® enhances the return of micro and macro nutrients from the residue to the soil and will help drive CO2 cycling, promote higher yields and healthier soil. REVENUE® is tank mix ready, allowing you to get more value from your burndown application and can be applied to all types of crop residue. Deploy REVENUE® to reclaim your investment dollars currently tied up by residue in your field

Recommended Application Rates: 32 oz/acre as a stand alone application with water and/or Nitrogen as a carrier or added to your Fall or Spring Burndown.
