

SWIFT KICK®

FUNGICIDE ACTIVATOR ADJUVANT

SwiftKick® is a unique multi-purpose activator adjuvant that will enhance chemical activity with premium ingredients and proven performance. SwiftKick® is highly compatible and can be applied to all crops. It's low use rate makes it convenient.

SwiftKick® is a blend of humectants, plant extract and deposition aid. A humectant is used to hold liquids (i.e. water, fungicide, insecticide, etc.) on the leaf for a longer period of time with minimal evaporation. There are a lot of days when we are spraying fungicide in extreme heat. Swiftkick will allow more time for the solutions being sprayed to be absorbed through the leaf cuticle, allowing for better translocation of the fungicide /insecticide. The plant extract within Swiftkick® signals the plant to open the stomates (pores) and allows the solution to enter the plant. The deposition aid increases the size and weight of the droplets to increase the amount of spray solution that reaches the plant with an aerial application and thus fall deeper into the canopy.

SwiftKick® Advantages:

- Increases fungicide and insecticide performance
- Accelerates droplet retention and coverage
- Improves penetration and translocation
- Maximizes the return on investment
- Performance on a wide range of diseases and systemic fungicides
- 99.5% proprietary blend of active ingredients

Directions for use:

Ground Application: 1 pt of SwiftKick® per 100 gals of spray solution

Aerial application: 1 qt of SwiftKick® per 100 gals of spray solution
